Lesson Plan

Name of the Faculty : Sonia

Discipline : Common for all Classes

Semester : 2nd

Subject : Applied Chemistry -II

Paper Code : 170024

Lesson Plan Duration : 15 weeks (from January 2018 to April 2018)

Week		Theory		Practical
	Lecture	Торіс	Practical	Topic
	Day	(including assignment/ test)	Day	
1 st	1 st	General metallurgical terms and operations with	1 st	Gravimetric
		reference to iron, copper and		analysis and
		aluminium(Lecture-1)		apparatus used in gravimetric analysis
	2 nd	General metallurgical terms and operations with		
		reference to iron(Lecture-2)		
	3 rd	General metallurgical terms and operations with		
		reference to iron(Lecture-3)		
2 nd	1 st	Manufacture of steel- Open hearth process	1 st	Determination of percentage purity of commercial sample of blue vitriol using N/20
	2 nd	Alloys- definition and purpose of alloying		
	3 rd	Type of alloys – ferrous and non-ferrous alloys,		
		properties and applications of ferrous alloys-		
		invar, nichrome, stainless steel, alnico		
ord	a ct		4 ct	Na2S2O3
3 rd	1 st	Properties and applications of non-ferrous	1 st	Practice Practical 1 and 2
		alloys – brass, bronze, duralumin, magnalium and solder		
	2 nd			
	2	Home Work Checking Assignment 1 Distributions On any		
		• Assignment-1 Distribution: On any one of the three topics:		
		i) List of iron, aluminium and		
		copper metal ores and place of		
		occurrences in India		
		ii) Names of steel plants situated in		
		India.		
		iii) Enlist hydro power plants and		
		nuclear power plants in India		
	3 rd	Definition of corrosion, its types and factors		
		affecting corrosion rate		
4 th	1 st	Theories of dry (chemical) corrosion- Pilling Bedworth rule Theories of wet corrosion in acidic atmosphere	1 st	Gravimetric
				estimation of
				moisture in the
		by hydrogen evolution mechanism		given coal sample
	3 rd	Definition of passivity in metals as per galvanic		(proximate
		series		, d
		Series		analysis)
5 th	1 st	Corrosion control:	1 st	Determination of
		Metal coatings – Cathodic protection(Sacrificial protection and impressed current voltage), Cementation		percentage
				composition of
		on Base Metal Steel – Application of		volatile/non
		Metal Zn (Sheradizing),Cr		volatile matter in
		(Chromozing) and Al (Calorizing),		, Glacilo illattoi illi
		Inorganic coatings – Anodizing and		

		phosphating		the given coal
	2 nd	Corrosion control:		
		Organic coatings - use of paints		sample
		varnishes and enamels		
		Internal corrosion preventive measures-		
		alloying (with reference to passivating,		
		neutralizing and inhibition) and heat		
	3 rd	treatment (quenching, annealing)		
	3	Class Work Checking/ Assignment-1 Checking		
6 th	1 st	Checking Test-1	1 st	Practice Practical 3
0	2 nd	Definition of fuel, classification of fuels,	1	and 4
	_	characteristics of good fuel, relative merits of		
		gaseous, liquid and solid fuels		
	3 rd	Calorific value-higher calorific value, lower		
		calorific value		
7 th	1 st	Determination of calorific value of solid or	1 st	Gravimetric
		liquid fuel using Bomb calorimeter and		estimation of ash
		numerical examples		content in the
	2 nd	Coal - types of coal and proximate analysis of		given coal sample
		coal		(proximate
	3 rd	Assignment-2 Distribution First arting Costons graphen and Costons		analysis)
	3	Fuel rating – Octane number and Cetane number, fuel-structural influence on Octane and		
		Cetane numbers		
8 th	1 st	Gaseous fuels – chemical composition, calorific	1 st	Determination of
	-	value and applications of natural gas (CNG),	-	viscosity of given
		LPG, producer gas, water gas and biogas		liquid using
	2 nd	Elementary ideal on – hydrogen as future fuels,		Redwood
		nuclear fuels		viscometers
	3 rd	• Revision		
9 th	1 st	• Test-2	1 st	Practice Practical 5
	2 nd	Definition of Lubricant and lubrication, type of		and 6
		lubrications –hydrodynamic, boundary		
	3 rd	lubrication with illustrative diagrams Classification of lubricants—liquid lubricants,		
	3			
		solid lubricants with examples		
10 th	1 st	solid lubricants with examples Classification of lubricants- semi-solid	1 st	Determination of
10 th	1 st	Classification of lubricants- semi-solid	1 st	
10 th			1 st	Determination of flash point of given lubricating
10 th	1 st	Classification of lubricants- semi-solid lubricants and synthetic lubricants with examples Physical properties of lubricant –viscosity and	1 st	flash point of given lubricating oil using Able's
10 th		Classification of lubricants- semi-solid lubricants and synthetic lubricants with examples Physical properties of lubricant –viscosity and viscosity index, cloud point and pour point,	1 st	flash point of given lubricating oil using Able's flash point
10 th	2 nd	Classification of lubricants- semi-solid lubricants and synthetic lubricants with examples Physical properties of lubricant –viscosity and viscosity index, cloud point and pour point, flash point and fire point, oiliness	1 st	flash point of given lubricating oil using Able's
10 th		Classification of lubricants- semi-solid lubricants and synthetic lubricants with examples Physical properties of lubricant –viscosity and viscosity index, cloud point and pour point, flash point and fire point, oiliness Chemical properties of lubricant - total acid	1 st	flash point of given lubricating oil using Able's flash point
10 th	2 nd	Classification of lubricants- semi-solid lubricants and synthetic lubricants with examples Physical properties of lubricant –viscosity and viscosity index, cloud point and pour point, flash point and fire point, oiliness Chemical properties of lubricant - total acid value or number (TAV or TAN), carbon	1 st	flash point of given lubricating oil using Able's flash point
_	2 nd	Classification of lubricants- semi-solid lubricants and synthetic lubricants with examples Physical properties of lubricant –viscosity and viscosity index, cloud point and pour point, flash point and fire point, oiliness Chemical properties of lubricant - total acid value or number (TAV or TAN), carbon residue, emulsification factor and iodine value		flash point of given lubricating oil using Able's flash point apparatus
10 th	2 nd	Classification of lubricants- semi-solid lubricants and synthetic lubricants with examples Physical properties of lubricant –viscosity and viscosity index, cloud point and pour point, flash point and fire point, oiliness Chemical properties of lubricant - total acid value or number (TAV or TAN), carbon residue, emulsification factor and iodine value Designation of lubricating oils according to	1 st	flash point of given lubricating oil using Able's flash point
_	2 nd	Classification of lubricants- semi-solid lubricants and synthetic lubricants with examples Physical properties of lubricant –viscosity and viscosity index, cloud point and pour point, flash point and fire point, oiliness Chemical properties of lubricant - total acid value or number (TAV or TAN), carbon residue, emulsification factor and iodine value Designation of lubricating oils according to Society of Automotive Engineers (SAE)		flash point of given lubricating oil using Able's flash point apparatus
	2 nd 3 rd	Classification of lubricants- semi-solid lubricants and synthetic lubricants with examples Physical properties of lubricant –viscosity and viscosity index, cloud point and pour point, flash point and fire point, oiliness Chemical properties of lubricant - total acid value or number (TAV or TAN), carbon residue, emulsification factor and iodine value Designation of lubricating oils according to Society of Automotive Engineers (SAE) Cutting fluids – applications of cutting fluids,		flash point of given lubricating oil using Able's flash point apparatus
_	2 nd 3 rd 1 st 2 nd	Classification of lubricants- semi-solid lubricants and synthetic lubricants with examples Physical properties of lubricant –viscosity and viscosity index, cloud point and pour point, flash point and fire point, oiliness Chemical properties of lubricant - total acid value or number (TAV or TAN), carbon residue, emulsification factor and iodine value Designation of lubricating oils according to Society of Automotive Engineers (SAE)		flash point of given lubricating oil using Able's flash point apparatus
_	2 nd 3 rd	Classification of lubricants- semi-solid lubricants and synthetic lubricants with examples Physical properties of lubricant –viscosity and viscosity index, cloud point and pour point, flash point and fire point, oiliness Chemical properties of lubricant - total acid value or number (TAV or TAN), carbon residue, emulsification factor and iodine value Designation of lubricating oils according to Society of Automotive Engineers (SAE) Cutting fluids – applications of cutting fluids, types and the factors that govern the selection of		flash point of given lubricating oil using Able's flash point apparatus
11 th	2 nd 3 rd 2 nd	Classification of lubricants- semi-solid lubricants and synthetic lubricants with examples Physical properties of lubricant –viscosity and viscosity index, cloud point and pour point, flash point and fire point, oiliness Chemical properties of lubricant - total acid value or number (TAV or TAN), carbon residue, emulsification factor and iodine value Designation of lubricating oils according to Society of Automotive Engineers (SAE) Cutting fluids – applications of cutting fluids, types and the factors that govern the selection of cutting fluids • Class Work Checking/ Assignment Checking-2	1 st	flash point of given lubricating oil using Able's flash point apparatus Practice Practical 7
_	2 nd 3 rd 1 st 2 nd	Classification of lubricants- semi-solid lubricants and synthetic lubricants with examples Physical properties of lubricant –viscosity and viscosity index, cloud point and pour point, flash point and fire point, oiliness Chemical properties of lubricant - total acid value or number (TAV or TAN), carbon residue, emulsification factor and iodine value Designation of lubricating oils according to Society of Automotive Engineers (SAE) Cutting fluids – applications of cutting fluids, types and the factors that govern the selection of cutting fluids • Class Work Checking/ Assignment Checking-2 Definition and types with suitable examples		flash point of given lubricating oil using Able's flash point apparatus Practice Practical 7 To study the
11 th	2 nd 3 rd 2 nd	Classification of lubricants- semi-solid lubricants and synthetic lubricants with examples Physical properties of lubricant –viscosity and viscosity index, cloud point and pour point, flash point and fire point, oiliness Chemical properties of lubricant - total acid value or number (TAV or TAN), carbon residue, emulsification factor and iodine value Designation of lubricating oils according to Society of Automotive Engineers (SAE) Cutting fluids – applications of cutting fluids, types and the factors that govern the selection of cutting fluids • Class Work Checking/ Assignment Checking-2	1 st	flash point of given lubricating oil using Able's flash point apparatus Practice Practical 7

	2 nd	Glass-chemical composition and application of Soda • Assignment-3 Distribution		coupling on corrosion of iron
	3 rd	Chemical composition and application of Borosilicate and lead glasses		
13 th	1 st	Paint, varnish and enamels- definition, constituents	1 st	Detection of iron
	2 nd	Advantages of Paint, varnish and enamels		metal in the given
	3 rd	Definition of polymer, monomer and degree of polymerization		solution of rust(solution of rust in HCl be provided)
14 th	1 st	Brief introduction to addition and condensation polymers with suitable examples (PE, PS, PVC, Teflon, Nylon -66 and Bakelite)	1 st	Practice Practical 8 and 9
	2 nd	Definition of plastics, thermo plastics and thermo setting plastics with suitable examples, distinctions between thermo plastics and thermo settings		
	3 rd	Applications of polymers in industry and daily life		
15 th	1 st	Revision/ Home Work Checking	1 st	Practical Test
	2 nd	Class Work Checking/ Assignment-3 Checking		
	3 rd	• Test-3
